newtec construction is a general Building and Civil Engineering Main Contractor offering a full turnkey service for the construction of steel frame or traditional build projects including all associated groundworks and external works.

newtec construction was established 9 years ago and has now built up a firm client base working on referrals only. This client base includes developers, councils and smaller individual companies as well as domestic clients.

Typical project values undertaken range from a few thousand pounds to in excess of a million pounds

newtec construction employs a range of qualified and longterm employees and is well placed to carry out all the major trades associated with construction such as Groundworks, Bricklaying, Plastering, Concrete work and Joinery. In addition to this **newtec construction** has good links with a small but flexible database of specialist subcontractors and hence can also carry out in an economical

manner the full range of construction activities to suit any project or programme constraints

newtec construction is centrally based in the East Midlands with good links to most areas of the country, recent works undertaken involve the extension and refurbishment of a marina in Farndon Nottinghamshire and the construction of a community centre and sports hall in Takeley near Stansted, Essex

newtec construction is a member of NHBC and has carried out numerous domestic house building including its own small developments
